Transformed toys
Grade 3-4’s are learning about thinking about and making art works in 3D. They will be learning construction skills and designing a gathering space for a transformed toy. Thankyou to all the families who have rummaged through their toy boxes and donated plastic toys for us to deconstruct and reassemble. Students have nearly completed building their character, mastering the hot glue gun and are now turning their efforts to making a fun space to suit their toy. They will draw on their classroom learning about community and public spaces and will develop skills in fitting together, building by cutting and shaping and develop the ability to choose the best joining method and the most appropriate materials to solve construction challenges. They will develop knowledge of different tools and attachment techniques appropriate for each of the different construction materials they choose such as cardboard, balsa wood hard wood etc.
They are very excited about this art project. Some weird and wonderful characters indeed.
